

Project Design Phase
Proposed Solution Template

Date	24 March 2026
Team ID	69bf7fca443e4a653d45f826
Project Name	Smart Library Request Workflow in ServiceNow
Maximum Marks	2 Marks

Proposed Solution Template:

S.No	Parameter	Description
1	Problem Statement (Problem to be solved)	Manual library book request processes cause delays, errors, and lack of transparency for both students and librarians. Tracking requests, approvals, and overdue books is time-consuming and inefficient.
2	Idea / Solution Description	Implement an automated library request workflow using ServiceNow. Features include online request submission, automated approval workflows, real-time request tracking, notifications, and analytics dashboards for library management. Integrates with Gmail and LinkedIn for user authentication.
3	Novelty / Uniqueness	Combines workflow automation, real-time tracking, and integrated notifications in a single platform. Unlike traditional systems, it minimizes manual intervention, reduces delays, and provides actionable insights via dashboards. Predictive features for book recommendations can also be added for personalization.
4	Social Impact / Customer Satisfaction	Enhances student experience by providing transparent, fast, and convenient request handling . Reduces stress for library staff and ensures timely book issuance and returns . Promotes digital adoption in library operations, improving overall efficiency and satisfaction.
5	Business Model (Revenue Model)	Can be deployed in universities and libraries as a Software-as-a-Service (SaaS) model. Revenue can come from subscription fees for institutions, additional modules for analytics, and premium features such as predictive recommendations and advanced reporting.
6	Scalability of the Solution	Fully scalable via ServiceNow cloud infrastructure . Can handle multiple libraries, thousands of users , and high volume of requests. Future expansion possible with additional features like AI-driven book recommendations, mobile app support, and integration with other campus systems.
